

MOOD PLAYLIST APP

by

Ankita Mane, Bradrick Rush, Darren Pelletier

WHAT IS MOOD PLAYLIST?

Mood Playlist is an intelligent web application that generates personalized Spotify playlists based on your mood. Whether you're feeling sad, hyped, or just want to chill, our app curates music that resonates emotionally by combining mood tagging, music data, and design simplicity.

PROBLEM

- **Music is emotional — but most music apps aren't.**
- **Users often struggle to create playlists that truly reflect how they feel. While platforms like Spotify offer generic recommendations, they fall short when it comes to:**
 - **Capturing nuanced moods beyond broad genres**
 - **Personalizing playlists based on emotional context**
 - **Detecting energy levels or mental states**
 - **Creating a seamless, emotionally resonant experience**
- **Frustrated users, repetitive tracks, and playlists that feel robotic rather than relatable — which can be demotivating or even counterproductive, especially when users seek music to focus, relax, or release stress.**

SOLUTION: MOOD PLAYLIST

- **Connects to your Spotify account**
- **Playlist generation**
 - **Presets for Happy/Sad/Chill/Anger**
 - Customizable tags
 - Genre
 - Specific artist
 - Region
 - Exclude artist
 - **Limit songs**
 - **Can save the generated playlist to Spotify**
 - Choose an image as a cover for the generated playlist
- **Recently played songs from your Spotify account**

WHO WE ARE

Bradrick Rush

- **Project Manager**
- **Skills**
 - **C/C++**
 - **Python**
 - **Perl**
 - **HTML**

Ankita Mane

- **Skills**
 - **C/C++**
 - **Python**
 - **Flask**
 - **HTML/CSS/JS**

Darren Pelletier

- **Skills**
 - **Python**
 - **Java**
 - **Flask**
 - **HTML**

WHY ARE WE A GOOD TEAM?

- **Frequent communication.**
 - **Using a scrum approach.**
- **We help each other with testing functions.**
 - **Manual testing.**
- **Using GitHub:**
 - **Revision Control:**
 - **Assuring consistency in the repository.**
 - **Avoiding conflicts in commits.**
 - **Project Management:**
 - **Determine key items to work on.**
 - **Assign items to team members.**
 - **Update the status of the item.**

PERSONAS

John Brown – 31, Fitness Instructor

- Loves high-energy music (EDM, Hip-Hop) for workouts. Wants playlists tailored to mood and intensity

“I want to choose my energy level in the Angry mood to match my workout.”

“I want to build a playlist with my favorite genres based on my mood.”

“I want playlists to auto-refresh with my favorite genres.”

Emily Lynn – 20, College Student & Part-Time Barista

- Loves chill, acoustic, and lofi music for focus and relaxation while studying.

“I want to quickly find playlists that match my ‘chill’ or ‘happy’ mood so I can focus.”

“I want to filter for acoustic, lofi, or chill tunes to help me relax and study.”

PERSONAS

Carter Oliver – 26, Concert Photographer & Writer

- Loves sad, reflective music (indie, alt-rock, melancholic piano) for emotional depth and inspiration while writing.

“I want playlists based on my emotional state so I can feel more connected to the music.”

“I want to explore indie and melancholic genres that match my mood.”

“I want fewer mainstream tracks and more emotionally resonant ones.”

Charlie Davidson – 35, Software Developer

- Channels frustration and stress through high-energy music (rock, metal, aggressive rap) to stay productive during tough workdays.

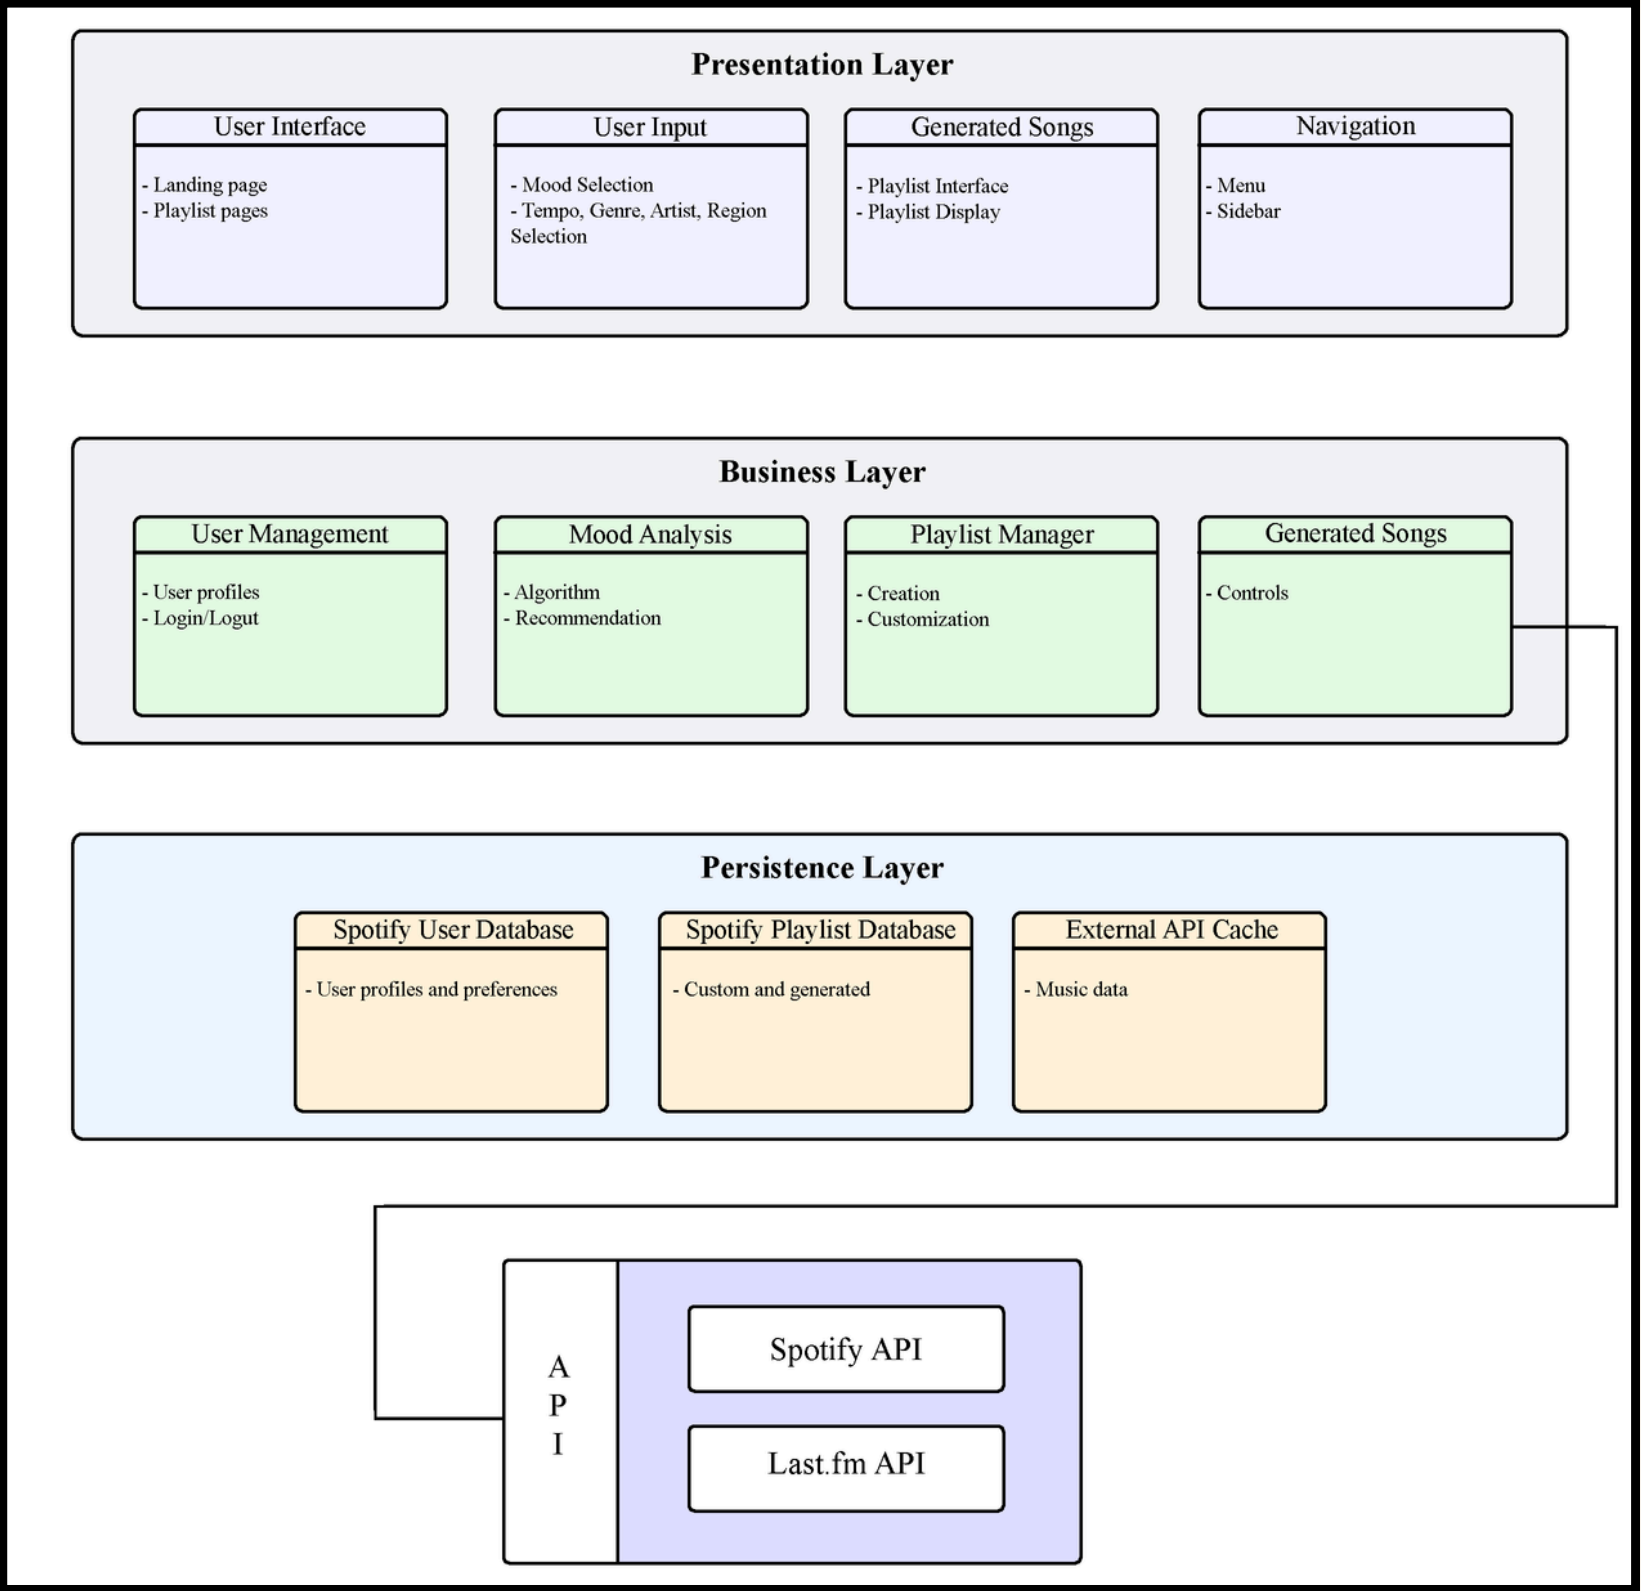

“I want fast access to intense music when I’m frustrated.”

“I want a playlist of rage-fueled music to stay productive when I’m overwhelmed.”

“I want a one-tap option to start my go-to intense playlist.”

UNDER THE HOOD

- **Technology used:**
 - **Frontend:**
 - **HTML, CSS, JavaScript**
 - **Backend:**
 - **Python, Flask**
 - **Jinja2**
 - **APIs:**
 - **Spotify for playlist creation**
 - **Last.fm for song generation**

DEMO

CONCLUSION

Our website delivers a personalized music discovery experience for Spotify that matches feeling to sound. We offer numerous features that allow for each playlist to have its own personal touch. Our system combines both Spotify and Last.fm APIs so that we can get the best possible matches between songs and moods.

We used some technologies new to us creating a learning experience for us all. Working with the APIs helped push us to understand more about authentication tokens, data parsing and more.
